Re: Smartmetering devices violate building codes AND ALL SHOULD BE RECALLED IMMEDIATELY!

--The new electronic metering devices on electrical utility lines use power to run on so they are un-coded appliances that can be remotely hacked, shut down, and can spontaneously ignite a fire. Sound engineer Eric Anderson stated "Smartmeters emit audible noise" in 2015 Phoenix hearing Corp. Comm. --EMF/RF damages to body and property coverages secretly being dropped by insurers. These 'meters' literally TAZE 2.1 miles each in a 30 degree cone overlapping. **UNINSURABLE=UNINHABITABLE** --These digital meters violate building vibration codes, resulting in the loosening of pipe fittings, and deterioration of old wiring including appliance and HVAC blow-outs. Other public health and safety laws concerning violations of pool safety [ESD=electric shock drowning], electrical, fire codes and privacy rights, since many 'meters' have a microphone, according to the FCC. Additionally, these 'meters' send microwave irradiation of up to 900 MHz or more- on 60 Hz wiring through all the outlets. The SGIG promises huge grants after 100% deploy of these 'meters', which perform Criminal Assault by Radiation = CAR. --The prongs of the digital meters are said to be thinner than the mechanical meters and therefore allow arcing and sparking inside the meter base. --

PS= gas and water coded mechanical meters also being replaced with un-coded battery-operated electronics that can cause EMF/RF damages including sonar, radar frequencies harmful to biology. Some of the stickers on the side of the electricity 'meter' read "Risk of...death".
